

ALGERIA-Autoroute Est-Ouest Project (COJAAL, CITIC-CRCC) 2007-2015

Supply of rubber-steel system-rebars, bearings, impermeabilization systems and guard rails

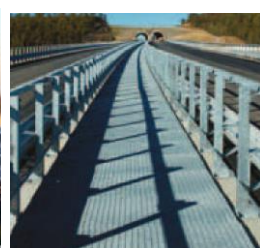

Safet has supplied sophisticated structural devices such as bridge bearings and expansion joints for bridges and offers direct assistance on site, structural and seismic retrofitting, consolidations, application of carbon fibres, lifting of bridges and structures, replacement of bearings, expansion joints and anti-seismic de-vices, restoration of concrete slabs and concrete.

Road guardrails were designed and developed in total compliance to the European reference standard EN1317, which indicates the performance requirements for restraint system and defines the performance classes and crash test acceptance criteria. Safet provides all different model of security rails, such as:

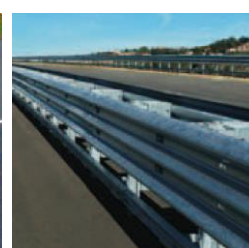

Single-side guardrails

Guardrails for bridges

Special components

Central reserve
